

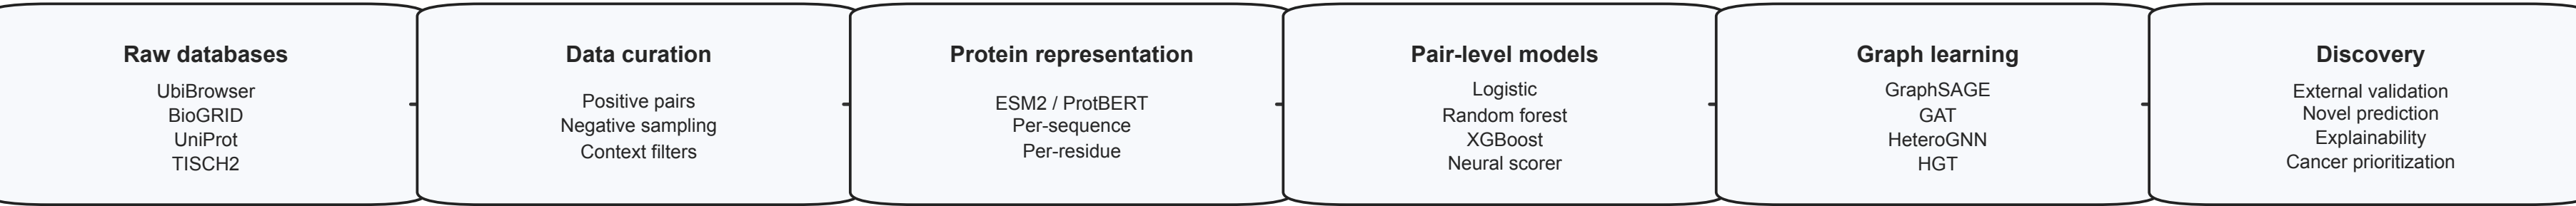

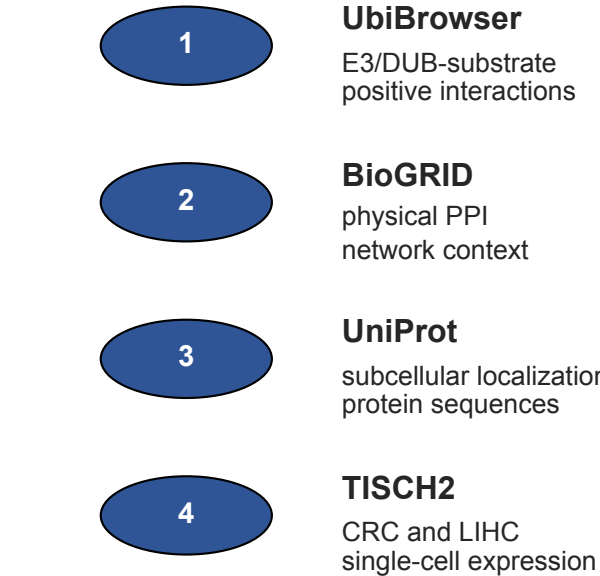

Figure 1. Overview of the E3/DUB specificity prediction and discovery framework

A. End-to-end computational workflow

B. Biological data sources

C. Final heterogeneous graph

|                       |         |
|-----------------------|---------|
| Proteins              | 2,105   |
| Labeled pairs         | 6,196   |
| PPI edges             | 60,723  |
| Co-localization edges | 193,159 |
| Total graph edges     | 260,078 |

D. Model-to-discovery framework
